SCOREAPP

1 Download the app to your watch: go to Google Play and search for ScoreApp

2 Pair your watch with your Box ScoreApp.

3 Configure, launch and control the match with the watch
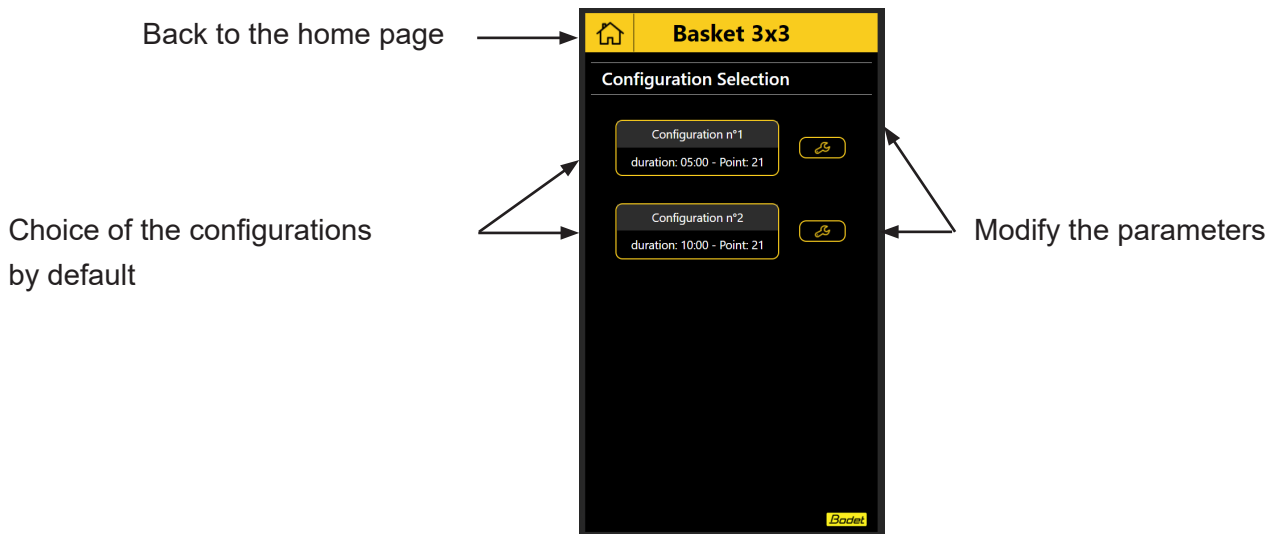

Connected watch
Information :

the smartphone and the watch are likely to lose Wi-Fi communication with the ScoreApp Box if the distance to the ScoreApp Box is large. This distance varies depending on the brand of your product. Regarding the watch, the loss of Wi-Fi connection does not lose the match information, all it is needed is to go back within the Wi-Fi coverage to regain control over the match information. However, regarding the smartphone, a loss of Wi-Fi connection "entails to restart the match and to reconnect according to the steps above.

7. Connecting to ScoreApp

The following login procedure must be performed to access the:

- configuration of ScoreApp in HF
- configuration for the update
- configuration for changing field identification
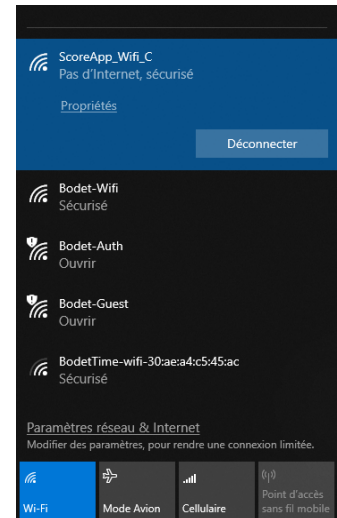

1) Using your PC, connect to the Wi-Fi access point of the ScoreApp BOX
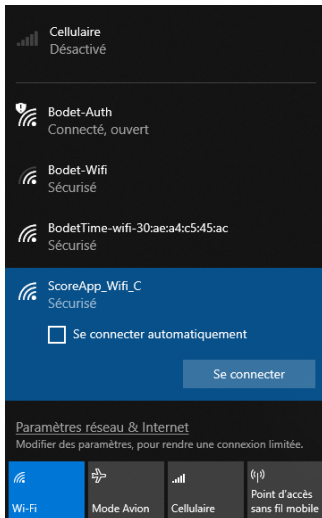

2) Enter the Wi-Fi network security key for the ScoreApp Box (BodetSport49)
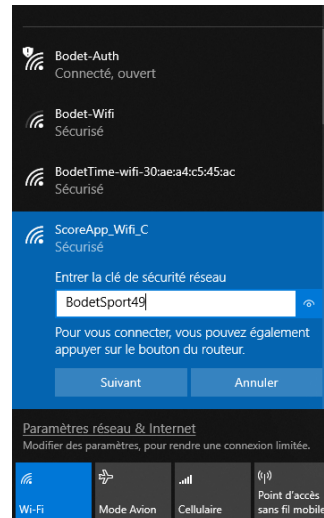

3) The PC and the ScoreApp Box are now connected

4) Open an internet browser and enter the IP address of the ScoreApp Box to access its interface. IP address: 192.168.0.100:8080.

5) On the Box ScoreApp web interface home page, click on **Admin ScoreApp**:

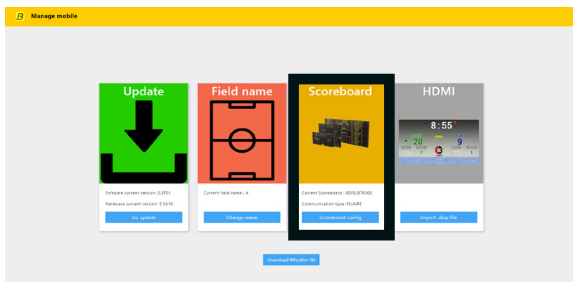

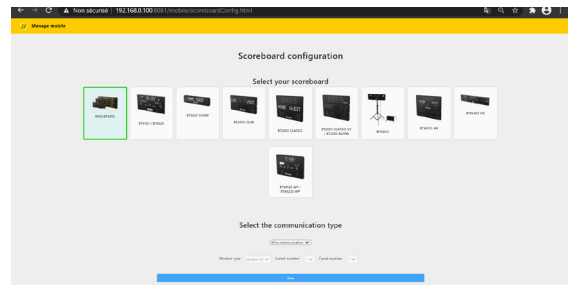

6) Enter the password (4934):
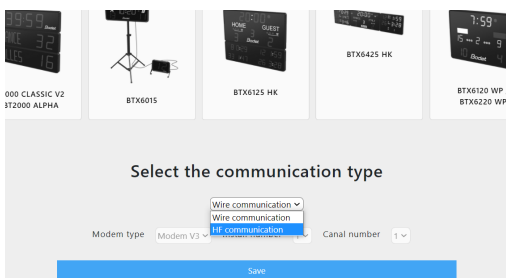

8. ScoreApp setup in HF

1) Click on **Scoreboard**:

2) Select the scoreboard with which the ScoreApp box should communicate in HF:

3) Select the communication mode, modem type, installation number and channel number using each drop-down menu:

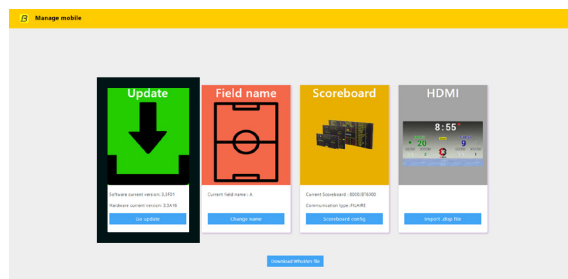

9. Update procedure

1) Retrieve the WhoIAm file (.info) by clicking on Download **WhoIAm file :**

2) Click on the **Go update** button:

3) **Contact Bodet customer support or visit the update.bodet.com website (***disconnect the PC from the WiFi network of the ScoreApp box, then reconnect the PC to the WiFi network of your Internet operator in order to access the Bodet website).*

Download the key file (.key) and the licence file (.fw) which will be sent to you once you provide the WhoIAm file (.info) for your product. These two files should be stored on a USB stick in a shared location (do not put one file in one directory and the other file in another directory).
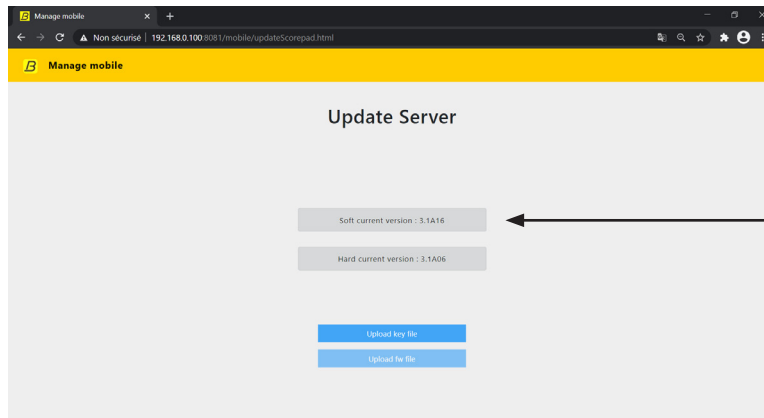

4) Reconnect the PC to the WiFi network of the ScoreApp box (steps 1 to 6) and then click on Go Update

to load the two files in the following order:

- **Upload key file**: upload the .key file from the USB stick
- **Upload fw file**: upload the .fw file from the USB stick

Reminder: these two files must be located in the same directory on the USB stick

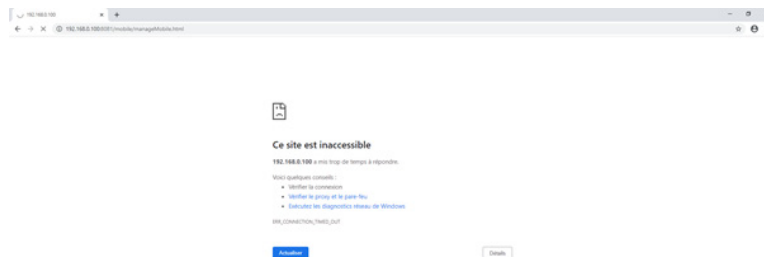

Current software and hardware versions of your ScoreApp box

5) Wait for the update to complete (3 steps over about 20 minutes).

6) The ScoreApp box restarts (an error message appears, this is a normal step. Click on the **OK** button):

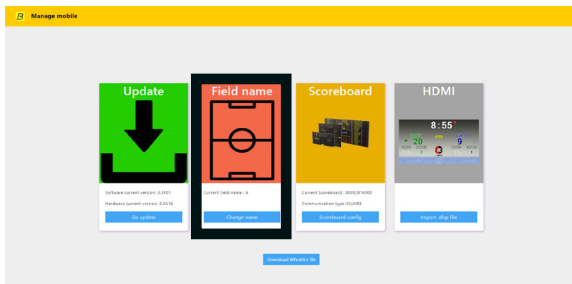

7) The ScoreApp Box web page cannot be accessed during the restart:

8) Wait about one minute for the Box ScoreApp to restart.

10. Procedure for changing field identification

1) Click on the **Change name** button:

2) Change the field number using the drop-down menu (this does not change the ScoreApp box Wi-Fi network name):

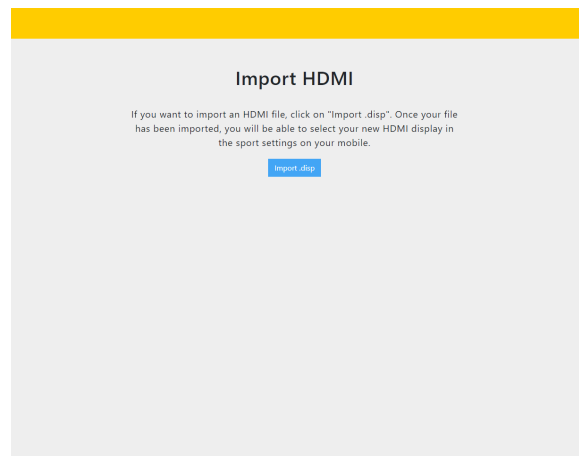

11. Procedure for importing a HDMI display

1) Click on the **Import .disp file** button:

2) Click on the **Import .disp** button and select the file:

12. FAQ

Can a second person log in to ScoreApp during a match?

On a smartphone, a second person can log in to ScoreApp and take control. However, this second person must scan the two QR codes and enter the access code. Once the second person has taken control, the first person logged in loses control and must in turn enter the password to regain control.
The system is both open and secure.
With a smartwatch, several watches can be connected at the same time. If a match is started by the first watch, the second watch will start automatically.

Can we display logos, change team names or HDMI wallpaper?

This is not possible with ScoreApp, which has been developed as a very easy way to manage the timer and scores.
For any other function, our Scorepad touchscreen keyboard is the ideal product. It allows you to display all the match information (individual fouls, points per player, penalty timers, team and player names, add logos, etc.)

Can you connect several screens at the same time?

The ScoreApp box has an HDMI output for connecting TV or video screens and an output for connecting Bodet scoreboards. You can connect an HDMI screen and a BODET scoreboard at the same time. You can even have multiple HDMI screens or multiple scoreboards if you wish (HDMI splitter - not supplied by Bodet).

Does the ScoreApp save the match information?

Nothing is saved if you leave the match.

Does the HDMI output automatically adjust to the TV screen?

No, it's the screen that adapts.

Does Bodet plan to market smartwatches?

No, we prefer to leave customers free to buy the model of their choice among the Wear OS watches.
